Chapter 3

Data Structure Documentation

3.1 `boot_t` Struct Reference

```
#include <boot.h>
```

3.1.1 Detailed Description

Definition at line 26 of file `boot.h`.

Data Fields

- unsigned long **magic**
- unsigned char **setup_sects**
- unsigned short **root_flags**
- unsigned long **sysize**
- unsigned short **ram_size**
- unsigned short **vid_mode**
- unsigned short **root_dev**
- unsigned short **signature**

3.1.2 Field Documentation

3.1.2.1 unsigned long `boot_t::magic`

Definition at line 27 of file `boot.h`.

Referenced by `get__boot__data()`.

3.1.2.2 unsigned char boot__t::setup_sects

Definition at line 28 of file `boot.h`.

3.1.2.3 unsigned short boot__t::root_flags

Definition at line 29 of file `boot.h`.

3.1.2.4 unsigned long boot__t::sysize

Definition at line 30 of file `boot.h`.

Referenced by `kinit()`.

3.1.2.5 unsigned short boot__t::ram_size

Definition at line 31 of file `boot.h`.

3.1.2.6 unsigned short boot__t::vid_mode

Definition at line 32 of file `boot.h`.

3.1.2.7 unsigned short boot__t::root_dev

Definition at line 33 of file `boot.h`.

3.1.2.8 unsigned short boot__t::signature

Definition at line 34 of file `boot.h`.

Referenced by `get__boot__data()`.

The documentation for this struct was generated from the following file:

- `/data/home/phil/svn/jinue/include/boot.h`

3.2 e820__t Struct Reference

```
#include <boot.h>
```

3.2.1 Detailed Description

Definition at line 19 of file boot.h.

Data Fields

- **e820__addr__t addr**
- **e820__size__t size**
- **e820__type__t type**

3.2.2 Field Documentation

3.2.2.1 e820__addr__t e820__t::addr

Definition at line 20 of file boot.h.

3.2.2.2 e820__size__t e820__t::size

Definition at line 21 of file boot.h.

Referenced by e820__get__size().

3.2.2.3 e820__type__t e820__t::type

Definition at line 22 of file boot.h.

Referenced by e820__get__type().

The documentation for this struct was generated from the following file:

- /data/home/phil/svn/jinue/include/**boot.h**

3.3 slab_cache_t Struct Reference

```
#include <slab.h>
```

Collaboration diagram for slab_cache_t:

3.3.1 Detailed Description

data structure describing a cache

Definition at line 24 of file slab.h.

Data Fields

- **size_t obj_size**
size of objects to allocate
- **count_t per_slab**
number of objects per slab
- **slab_header_t * empty**
head of list of empty slabs
- **slab_header_t * partial**
head of list of partial slabs
- **slab_header_t * full**
head of list of full slabs
- unsigned long **vm_flags**
flags for mapping slabs in virtual memory
- struct **vm_alloc_t * vm_allocator**

virtual address space allocator for new slabs

3.3.2 Field Documentation

3.3.2.1 size_t slab_cache_t::obj_size

size of objects to allocate

Definition at line 26 of file slab.h.

Referenced by slab_prepare().

3.3.2.2 count_t slab_cache_t::per_slab

number of objects per slab

Definition at line 29 of file slab.h.

Referenced by slab_prepare().

3.3.2.3 slab_header_t* slab_cache_t::empty

head of list of empty slabs

Definition at line 32 of file slab.h.

Referenced by slab_alloc(), and vm_vfree_block().

3.3.2.4 slab_header_t* slab_cache_t::partial

head of list of partial slabs

Definition at line 35 of file slab.h.

Referenced by slab_alloc(), and vm_vfree_block().

3.3.2.5 slab_header_t* slab_cache_t::full

head of list of full slabs

Definition at line 38 of file slab.h.

Referenced by slab_alloc().

3.3.2.6 unsigned long slab_cache_t::vm_flags

flags for mapping slabs in virtual memory

Definition at line 41 of file slab.h.

Referenced by slab_alloc().

3.3.2.7 struct vm_alloc_t* slab_cache_t::vm_allocator [read]

virtual address space allocator for new slabs

Definition at line 44 of file slab.h.

Referenced by slab_alloc(), and vm_vfree_block().

The documentation for this struct was generated from the following file:

- /data/home/phil/svn/jinue/include/**slab.h**

3.4 slab_header_t Struct Reference

```
#include <slab.h>
```

Collaboration diagram for slab_header_t:

3.4.1 Detailed Description

header of a slab

Definition at line 7 of file slab.h.

Data Fields

- **count_t available**
number of available objects in free list
- **addr_t free_list**
head of the free list
- **struct slab_header_t * next**
pointer to next slab in linked list
- **struct slab_header_t * prev**
pointer to previous slab in linked list

3.4.2 Field Documentation

3.4.2.1 count_t slab_header_t::available

number of available objects in free list

Definition at line 9 of file slab.h.

Referenced by slab_alloc(), and slab_prepare().

3.4.2.2 addr_t slab_header_t::free_list

head of the free list

Definition at line 12 of file slab.h.

Referenced by slab_alloc(), and slab_prepare().

3.4.2.3 struct slab_header_t* slab_header_t::next [read]

pointer to next slab in linked list

Definition at line 15 of file slab.h.

Referenced by slab_add(), and slab_remove().

3.4.2.4 struct slab_header_t* slab_header_t::prev [read]

pointer to previous slab in linked list

Definition at line 18 of file slab.h.

Referenced by slab_add(), and slab_remove().

The documentation for this struct was generated from the following file:

- /data/home/phil/svn/jinue/include/**slab.h**

3.5 vm_alloc_t Struct Reference

```
#include <vm_alloc.h>
```

Collaboration diagram for vm_alloc_t:

3.5.1 Detailed Description

data structure which keep tracks of free pages in a region of virtual memory

Definition at line 23 of file `vm_alloc.h`.

Data Fields

- **size_t size**
total amount of memory available
- **vm_link_t * head**
head of the free list
- **struct slab_cache_t * cache**
slab cache on which to allocate the links of the free list

3.5.2 Field Documentation

3.5.2.1 size_t vm_alloc_t::size

total amount of memory available

Definition at line 25 of file `vm_alloc.h`.

Referenced by `alloc_init()`, `e820_is_valid()`, `printk()`, and `vm_valloc()`.

3.5.2.2 `vm_link_t* vm_alloc_t::head`

head of the free list

Definition at line 28 of file `vm_alloc.h`.

Referenced by `vm_valloc()`, and `vm_vfree_block()`.

3.5.2.3 `struct slab_cache_t* vm_alloc_t::cache` `[read]`

slab cache on which to allocate the links of the free list

Definition at line 31 of file `vm_alloc.h`.

Referenced by `vm_valloc()`, and `vm_vfree_block()`.

The documentation for this struct was generated from the following file:

- `/data/home/phil/svn/jinue/include/vm_alloc.h`

3.6 vm_link_t Struct Reference

```
#include <vm_alloc.h>
```

Collaboration diagram for vm_link_t:

3.6.1 Detailed Description

links forming the linked lists of free virtual memory pages

Definition at line 8 of file vm_alloc.h.

Data Fields

- struct **vm_link_t** * **next**
next link in list
- **size_t** **size**
size of current virtual memory block
- **addr_t** **addr**
starting address of current block

3.6.2 Field Documentation

3.6.2.1 struct vm_link_t* vm_link_t::next [read]

next link in list

Definition at line 10 of file vm_alloc.h.

Referenced by vm_valloc(), and vm_vfree_block().

3.6.2.2 size_t vm_link_t::size

size of current virtual memory block

Definition at line 13 of file vm_alloc.h.

Referenced by vm_valloc(), and vm_vfree_block().

3.6.2.3 `addr_t vm_link_t::addr`

starting address of current block

Definition at line 16 of file `vm_alloc.h`.

Referenced by `vm_valloc()`, and `vm_vfree_block()`.

The documentation for this struct was generated from the following file:

- `/data/home/phil/svn/jinue/include/vm_alloc.h`

Chapter 4

File Documentation

4.1 /data/home/phil/svn/jinue/include/alloc.h File Reference

```
#include <kernel.h>
```

Include dependency graph for alloc.h:

This graph shows which files directly or indirectly include this file:

Functions

- void **alloc_init** (void)
- **addr_t** **alloc** (**size_t** size)
- void **free** (**addr_t** addr)

4.1.1 Function Documentation

4.1.1.1 `addr_t alloc (size_t size)`

ASSERTION: returned address should be aligned with a page boundary

Definition at line 96 of file alloc.c.

References `assert`, `PAGE_BITS`, `PAGE_MASK`, `PAGE_SIZE`, and `panic()`.

Referenced by `vm_alloc()`, `vm_map()`, and `vm_vfree_block()`.

```

96      {
97      addr_t addr;
98      size_t pages;
99
100     pages = size >> PAGE_BITS;
101
102     if( (size & PAGE_MASK) != 0 ) {
103         ++pages;
104     }
105
106     if(_alloc_size < pages) {
107         panic("out of memory.");
108     }
109
110     addr = _alloc_addr;
111     _alloc_addr += pages * PAGE_SIZE;
112     _alloc_size -= pages;
113
115     assert( ((unsigned long)addr & PAGE_MASK) == 0 );
116
117     return addr;
118 }
```

Here is the call graph for this function:

4.1.1.2 `void alloc_init (void)`

Definition at line 12 of file alloc.c.

References `e820_get_addr()`, `e820_get_size()`, `e820_get_type()`, `e820_is_available()`, `e820_is_valid()`, `e820_type_description()`, `kernel_start`, `kernel_top`, `PAGE_SIZE`, `panic()`, `printk()`, and `vm_alloc_t::size`.

Referenced by `kinit()`.

```

12         {
13     unsigned int idx;
14     unsigned int remainder;
15     bool avail;
16     size_t size;

50             if(addr < kernel_top) {
51                 /* if the region touches the kernel, we take only
52                  * the part above the kernel, if there is one... */
53                 if(addr + size <= kernel_top) {
54                     /* ... and apparently, there is none */
55                     continue;
56                 }
57
58                 fixed_addr = kernel_top;
59                 fixed_size -= fixed_addr - addr;
60             }
61         }
62     }

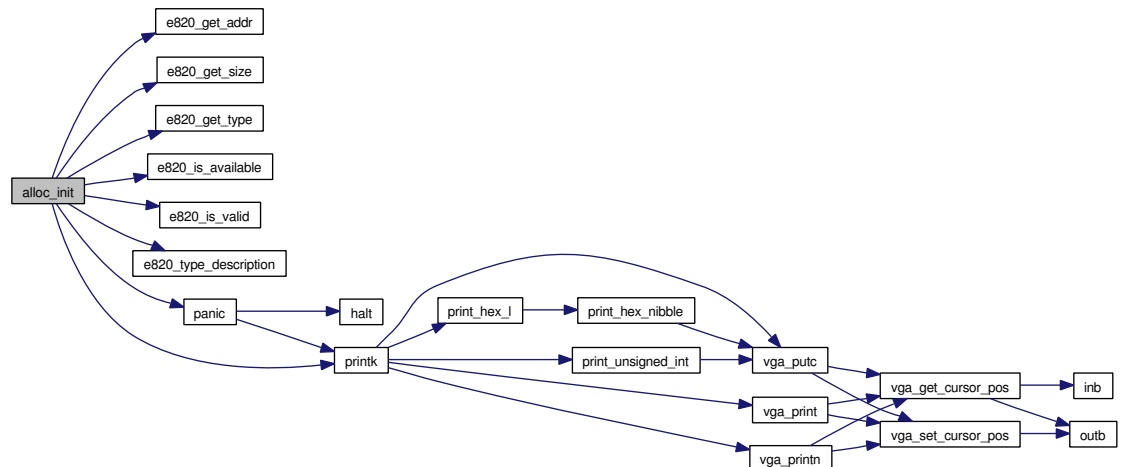

```

```

63      /* we must make sure the starting address is aligned on a
64      * page boundary. The size will eventually be divided
65      * by the page size, and thus need not be aligned. */
66      remainder = (unsigned int)fixed_addr % PAGE_SIZE;
67      if(remainder != 0) {
68          remainder = PAGE_SIZE - remainder;
69          if(fixed_size < remainder) {
70              continue;
71          }
72
73          fixed_addr += remainder;
74          fixed_size -= remainder;
75      }
76
77      if(fixed_size > best_size) {
78          best_addr = fixed_addr;
79          best_size = fixed_size;
80      }
81  }
82
83  _alloc_addr = (addr_t)best_addr;
84  _alloc_size = best_size / PAGE_SIZE;
85
86  if(_alloc_size == 0) {
87      panic("no memory to allocate.");
88  }
89
90  printk("%u kilobytes (%u pages) available starting at %xh.\n",
91        _alloc_size * PAGE_SIZE / 1024,
92        _alloc_size,
93        _alloc_addr );
94 }

```

Here is the call graph for this function:

4.1.1.3 void free (addr_t *addr*)

ASSERTION: we assume starting address is aligned on a page boundary

Definition at line 120 of file alloc.c.

References `assert`, and `PAGE_OFFSET_OF`.

Referenced by `vm_free()`.

```
120         {  
122     assert( PAGE_OFFSET_OF(addr) == 0 );  
123 }
```

4.2 /data/home/phil/svn/jinue/include/ascii.h File Reference

This graph shows which files directly or indirectly include this file:

Defines

- `#define CHAR_BS 0x08`
- `#define CHAR_HT 0x09`
- `#define CHAR_LF 0x0a`
- `#define CHAR_CR 0x0d`

4.2.1 Define Documentation

4.2.1.1 `#define CHAR_BS 0x08`

Definition at line 4 of file ascii.h.

4.2.1.2 `#define CHAR_CR 0x0d`

Definition at line 7 of file ascii.h.

4.2.1.3 `#define CHAR_HT 0x09`

Definition at line 5 of file ascii.h.

4.2.1.4 `#define CHAR_LF 0x0a`

Definition at line 6 of file ascii.h.

4.3 /data/home/phil/svn/jinue/include/assert.h File Reference

This graph shows which files directly or indirectly include this file:

Defines

- #define **assert**(expr)

Functions

- void **__assert_failed** (const char *expr, const char *file, unsigned int line, const char *func)

4.3.1 Define Documentation

4.3.1.1 #define assert(expr)

Value:

```
( (void) ( \
    (expr)?0:( __assert_failed(#expr, __FILE__, __LINE__, __func__) ) \
 ) )
```

Definition at line 12 of file assert.h.

Referenced by alloc(), free(), kinit(), slab_prepare(), vm_free(), vm_map(), vm_unmap(), vm_valloc(), and vm_vfree_block().

4.3.2 Function Documentation

4.3.2.1 void __assert_failed (const char * *expr*, const char * *file*, unsigned int *line*, const char * *func*)

Definition at line 5 of file assert.c.

References panic(), and printk().

```

9             {
10
11     printk(
12         "ASSERTION FAILED [%s]: %s at line %u in function %s.\n",
13         expr, file, line, func );
14
15     panic("Assertion failed.");
16 }

```

Here is the call graph for this function:

4.4 /data/home/phil/svn/jinue/include/boot.h File Reference

```
#include <kernel.h>
```

```
#include <stdbool.h>
```

Include dependency graph for boot.h:

Definition at line 11 of file boot.h.

Referenced by `e820_is_available()`, and `e820_type_description()`.

4.4.1.5 **#define E820_RESERVED 2**

Definition at line 12 of file boot.h.

Referenced by `e820_type_description()`.

4.4.1.6 `#define SETUP_HEADER 0x53726448`

Definition at line 9 of file boot.h.

4.4.2 Typedef Documentation

4.4.2.1 `typedef unsigned long long e820_addr_t`

Definition at line 15 of file boot.h.

4.4.2.2 `typedef unsigned long long e820_size_t`

Definition at line 16 of file boot.h.

4.4.2.3 `typedef unsigned long e820_type_t`

Definition at line 17 of file boot.h.

4.4.3 Function Documentation

4.4.3.1 `addr_t e820_get_addr (unsigned int idx)`

Definition at line 8 of file boot.c.

Referenced by `alloc_init()`.

```
8                                     {
9     return (addr_t)(unsigned long)e820_map[idx].addr;
10 }
```

4.4.3.2 `size_t e820_get_size (unsigned int idx)`

Definition at line 12 of file boot.c.

References `e820_t::size`.

Referenced by `alloc_init()`.

```
12                                     {
13     return (size_t)e820_map[idx].size;
14 }
```

4.4.3.3 `e820_type_t e820_get_type (unsigned int idx)`

Definition at line 16 of file boot.c.

References `e820_t::type`.

Referenced by `alloc_init()`.

```
16                                     {
17     return e820_map[idx].type;
18 }
```

4.4.3.4 `bool e820_is_available (unsigned int idx)`

Definition at line 24 of file boot.c.

References `E820_RAM`.

Referenced by `alloc_init()`.

```
24                                     {
25     return (e820_map[idx].type == E820_RAM);
26 }
```

4.4.3.5 `bool e820_is_valid (unsigned int idx)`

Definition at line 20 of file boot.c.

References `vm_alloc_t::size`.

Referenced by `alloc_init()`.

```
20                                     {
21     return (e820_map[idx].size != 0);
22 }
```

4.4.3.6 `const char* e820_type_description (e820_type_t type)`

Definition at line 28 of file boot.c.

References `E820_ACPI`, `E820_RAM`, and `E820_RESERVED`.

Referenced by `alloc_init()`.

```
28                                     {
29     switch(type) {
30
```

```

31     case E820_RAM:
32         return "available";
33
34     case E820_RESERVED:
35         return "unavailable/reserved";
36
37     case E820_ACPI:
38         return "unavailable/acpi";
39
40     default:
41         return "unavailable/other";
42 }
43 }

```

4.4.3.7 boot_t* get_boot_data (void)

Definition at line 45 of file boot.c.

References `BOOT_MAGIC`, `boot_setup_addr`, `BOOT_SIGNATURE`, `boot_t::magic`, `panic()`, and `boot_t::signature`.

Referenced by `kinit()`.

```

45     {
46     boot_t *boot;
47
48     boot = (boot_t *) ( boot_setup_addr - sizeof(boot_t) );
49
50     if(boot->signature != BOOT_SIGNATURE) {
51         panic("bad boot sector signature.");
52     }
53
54     if(boot->magic != BOOT_MAGIC) {
55         panic("bad boot sector magic.");
56     }
57
58     return boot;
59 }

```

Defines

- **#define PAGE_BITS 12**
number of bits in virtual address for offset inside page
- **#define PAGE_SIZE (1<<PAGE_BITS)**
size of page
- **#define PAGE_TABLE_BITS 10**
number of bits in virtual address for page table entry
- **#define PAGE_TABLE_ENTRIES (1<<PAGE_TABLE_BITS)**
number of entries in page table
- **#define PAGE_TABLE_SIZE PAGE_SIZE**
size of a page table
- **#define PTE_SIZE 4**
size of a page table entry, in bytes
- **#define KLIMIT (1<<24)**
Virtual address range 0 to KLIMIT is reserved by kernel to store global data structures.
- **#define PLIMIT (KLIMIT + (1<<24))**
Virtual address range KLIMIT to PLIMIT is reserved by kernel to store data structures specific to the current process.
- **#define PAGE_TABLES_ADDR KLIMIT**
This is where the page tables are mapped in every address space.

- `#define PAGE_DIRECTORY_ADDR (KLIMIT + PAGE_TABLE_ENTRIES * PAGE_TABLE_SIZE)`

This is where the page directory is mapped in every address space.

4.6.1 Define Documentation

4.6.1.1 `#define KLIMIT (1<<24)`

Virtual address range 0 to KLIMIT is reserved by kernel to store global data structures.

Kernel image must be completely inside this region. This region has the same mapping in the address space of all processes. Size must be a multiple of the size described by a single page directory entry (`PTE_SIZE * PAGE_SIZE`).

Definition at line 28 of file `vm.h`.

4.6.1.2 `#define PAGE_BITS 12`

number of bits in virtual address for offset inside page

Definition at line 5 of file `vm.h`.

Referenced by `alloc()`.

4.6.1.3 `#define PAGE_DIRECTORY_ADDR (KLIMIT + PAGE_TABLE_ENTRIES * PAGE_TABLE_SIZE)`

This is where the page directory is mapped in every address space.

It must reside in region spanning from KLIMIT to PLIMIT.

Definition at line 46 of file `vm.h`.

4.6.1.4 `#define PAGE_SIZE (1<<PAGE_BITS)`

size of page

Definition at line 8 of file `vm.h`.

Referenced by `alloc()`, `alloc_init()`, `kinit()`, `vm_alloc()`, `vm_map()`, `vm_valloc()`, `vm_vfree()`, and `vm_vfree_block()`.

4.6.1.5 #define PAGE_TABLE_BITS 10

number of bits in virtual address for page table entry

Definition at line 11 of file vm.h.

4.6.1.6 #define PAGE_TABLE_ENTRIES (1<<PAGE_TABLE_BITS)

number of entries in page table

Definition at line 14 of file vm.h.

Referenced by vm_map().

4.6.1.7 #define PAGE_TABLE_SIZE PAGE_SIZE

size of a page table

Definition at line 17 of file vm.h.

4.6.1.8 #define PAGE_TABLES_ADDR KLIMIT

This is where the page tables are mapped in every address space.

This requires a virtual memory region of size 4M, which must reside completely inside region spanning from KLIMIT to PLIMIT. Must be aligned on a 4M boundary

Definition at line 42 of file vm.h.

4.6.1.9 #define PLIMIT (KLIMIT + (1<<24))

Virtual address range KLIMIT to PLIMIT is reserved by kernel to store data structures specific to the current process.

The mapping of this region changes from one address space to the next. Size must be a multiple of the size described by a single page directory entry (PTE_SIZE * PAGE_SIZE).

Definition at line 36 of file vm.h.

4.6.1.10 #define PTE_SIZE 4

size of a page table entry, in bytes

Definition at line 20 of file vm.h.

4.7 /data/home/phil/svn/jinue/include/vm.h File Reference

Include dependency graph for vm.h:

This graph shows which files directly or indirectly include this file:

Defines

- `#define PAGE_MASK (PAGE_SIZE - 1)`
bit mask for offset in page
- `#define PAGE_OFFSET_OF(x) ((unsigned long)(x) & PAGE_MASK)`
offset in page of virtual address
- `#define PAGE_TABLE_MASK (PAGE_TABLE_ENTRIES - 1)`
bit mask for page table entry
- `#define PAGE_TABLE_OFFSET_OF(x) (((unsigned long)(x) >> PAGE_BITS) & PAGE_TABLE_MASK)`
page table entry offset of virtual (linear) address
- `#define PAGE_DIRECTORY_OFFSET_OF(x) (((unsigned long)(x) >> (PAGE_BITS + PAGE_TABLE_BITS))`
page directory entry offset of virtual (linear address)

- **#define PMAPPING_START** (PAGE_DIRECTORY_ADDR + PAGE_TABLE_SIZE)
low limit of region spanning from KLIMIT to PLIMIT actually available for mappings
- **#define PMAPPING_END** PLIMIT
high limit of region spanning from KLIMIT to PLIMIT actually available for mappings
- **#define PAGE_DIRECTORY** ((pte_t *)PAGE_DIRECTORY_ADDR)
page directory in virtual memory
- **#define PAGE_TABLES** ((page_table_t *)PAGE_TABLES_ADDR)
page tables in virtual memory
- **#define PAGE_TABLE_OF(x)** (PAGE_TABLES[PAGE_DIRECTORY_OFFSET_OF(x)])
page table in virtual memory
- **#define PDE_OF(x)** (&PAGE_DIRECTORY[PAGE_DIRECTORY_OFFSET_OF(x)])
address of page directory entry in virtual memory
- **#define PTE_OF(x)** (&PAGE_TABLE_OF(x)[PAGE_TABLE_OFFSET_OF(x)])
address of page table entry in virtual memory
- **#define PAGE_TABLES_TABLE** (PAGE_TABLE_OF(PAGE_TABLES_ADDR))
page table which maps all page tables in memory
- **#define PAGE_TABLE_PTE_OF(x)** (&PAGE_TABLES_TABLE[PAGE_DIRECTORY_OFFSET_OF(x)])
address of page entry in PAGE_OF_PAGE_TABLES
- **#define VM_FLAG_PRESENT** (1<< 0)
page is present in memory
- **#define VM_FLAG_READ_ONLY** (1<< 1)
page is read only

- #define **VM_FLAG_KERNEL** 0
kernel mode page (default)
- #define **VM_FLAG_USER** (1<< 2)
user mode page
- #define **VM_FLAG_WRITE_THROUGH** (1<< 3)
write-through cache policy for page
- #define **VM_FLAG_CACHE_DISABLE** (1<< 4)
uncached page
- #define **VM_FLAG_ACCESSED** (1<< 5)
page was accessed (read)
- #define **VM_FLAG_DIRTY** (1<< 6)
page was written to
- #define **VM_FLAG_BIG_PAGE** (1<< 7)
page directory entry describes a 4M page
- #define **VM_FLAG_GLOBAL** (1<< 8)
page is global (mapped in every address space)
- #define **VM_FLAGS_PAGE_TABLE** (VM_FLAG_USER | VM_FLAG_READ_ONLY)
set of flags for a page table (or page directory)

Typedefs

- typedef unsigned long **pte_t**
type of a page table (or page directory) entry
- typedef **pte_t** **page_table_t** [PAGE_TABLE_ENTRIES]
type of a page table

Functions

- void **vm_map** (**addr_t** vaddr, **addr_t** paddr, unsigned long flags)

Map a page frame (physical page) to a virtual memory page.

- void **vm_unmap** (**addr_t** addr)

Unmap a page from virtual memory.

4.7.1 Define Documentation

- 4.7.1.1 **#define PAGE_DIRECTORY** ((pte_t *)PAGE_DIRECTORY_ADDR)

page directory in virtual memory

Definition at line 49 of file vm.h.

- 4.7.1.2 **#define PAGE_DIRECTORY_OFFSET - OF(x) ((unsigned long)(x) >> (PAGE_BITS + PAGE_TABLE_BITS))**

page directory entry offset of virtual (linear address)

Definition at line 29 of file vm.h.

- 4.7.1.3 **#define PAGE_MASK (PAGE_SIZE - 1)**

bit mask for offset in page

Definition at line 11 of file vm.h.

Referenced by alloc(), slab_prepare(), and vm_free().

- 4.7.1.4 **#define PAGE_OFFSET_OF(x) ((unsigned long)(x) & PAGE_MASK)**

offset in page of virtual address

Definition at line 14 of file vm.h.

Referenced by free(), slab_prepare(), vm_map(), vm_unmap(), vm_valloc(), and vm_vfree_block().

4.7.1.5 `#define PAGE_TABLE_MASK (PAGE_TABLE_ENTRIES - 1)`

bit mask for page table entry

Definition at line 23 of file vm.h.

4.7.1.6 `#define PAGE_TABLE_OF(x) (PAGE_TABLES[PAGE_DIRECTORY_OFFSET_OF(x)])`

page table in virtual memory

Definition at line 55 of file vm.h.

Referenced by `vm_map()`.

4.7.1.7 `#define PAGE_TABLE_OFFSET_OF(x) (((unsigned long)(x) >> PAGE_BITS) & PAGE_TABLE_MASK)`

page table entry offset of virtual (linear) address

Definition at line 26 of file vm.h.

4.7.1.8 `#define PAGE_TABLE_PTE_OF(x) (&PAGE_TABLES_TABLE[PAGE_DIRECTORY_OFFSET_OF(x)])`

address of page entry in `PAGE_OF_PAGE_TABLES`

Definition at line 67 of file vm.h.

Referenced by `vm_map()`.

4.7.1.9 `#define PAGE_TABLES ((page_table_t *)PAGE_TABLES_ADDR)`

page tables in virtual memory

Definition at line 52 of file vm.h.

4.7.1.10 `#define PAGE_TABLES_TABLE (PAGE_TABLE_OF(PAGE_TABLES_ADDR))`

page table which maps all page tables in memory

Definition at line 64 of file vm.h.

4.7.1.11 `#define PDE_OF(x) (&PAGE_DIRECTORY[
PAGE_DIRECTORY_OFFSET_OF(x)])`

address of page directory entry in virtual memory

Definition at line 58 of file vm.h.

Referenced by slab_prepare(), and vm_map().

4.7.1.12 `#define PMAPPING_END PLIMIT`

high limit of region spanning from KLIMIT to PLIMIT actually available for mappings

Definition at line 43 of file vm.h.

4.7.1.13 `#define PMAPPING_START (PAGE_DIRECTORY_
ADDR + PAGE_TABLE_SIZE)`

low limit of region spanning from KLIMIT to PLIMIT actually available for mappings

Definition at line 39 of file vm.h.

4.7.1.14 `#define PTE_OF(x) (&PAGE_TABLE_OF(x)[
PAGE_TABLE_OFFSET_OF(x)])`

address of page table entry in virtual memory

Definition at line 61 of file vm.h.

Referenced by slab_prepare(), vm_free(), vm_map(), and vm_unmap().

4.7.1.15 `#define VM_FLAG_ACCESSED (1<< 5)`

page was accessed (read)

Definition at line 91 of file vm.h.

4.7.1.16 `#define VM_FLAG_BIG_PAGE (1<< 7)`

page directory entry describes a 4M page

Definition at line 97 of file vm.h.

4.7.1.17 #define VM_FLAG_CACHE_DISABLE (1<< 4)

uncached page

Definition at line 88 of file vm.h.

4.7.1.18 #define VM_FLAG_DIRTY (1<< 6)

page was written to

Definition at line 94 of file vm.h.

4.7.1.19 #define VM_FLAG_GLOBAL (1<< 8)

page is global (mapped in every address space)

Definition at line 100 of file vm.h.

4.7.1.20 #define VM_FLAG_KERNEL 0

kernel mode page (default)

Definition at line 79 of file vm.h.

Referenced by vm_vfree_block().

4.7.1.21 #define VM_FLAG_PRESENT (1<< 0)

page is present in memory

Definition at line 73 of file vm.h.

Referenced by slab_prepare(), and vm_map().

4.7.1.22 #define VM_FLAG_READ_ONLY (1<< 1)

page is read only

Definition at line 76 of file vm.h.

4.7.1.23 #define VM_FLAG_USER (1<< 2)

user mode page

Definition at line 82 of file vm.h.

Referenced by vm_map().

4.7.1.24 `#define VM_FLAG_WRITE_THROUGH (1<< 3)`

write-through cache policy for page

Definition at line 85 of file vm.h.

4.7.1.25 `#define VM_FLAGS_PAGE_TABLE (VM_FLAG_ - USER | VM_FLAG_READ_ONLY)`

set of flags for a page table (or page directory)

Definition at line 103 of file vm.h.

Referenced by `vm_map()`.

4.7.2 Typedef Documentation

4.7.2.1 `typedef pte_t page_table_t[PAGE_TABLE_ENTRIES]`

type of a page table

Definition at line 32 of file vm.h.

4.7.2.2 `typedef unsigned long pte_t`

type of a page table (or page directory) entry

Definition at line 20 of file vm.h.

4.7.3 Function Documentation

4.7.3.1 `void vm_map (addr_t vaddr, addr_t paddr, unsigned long flags)`

Map a page frame (physical page) to a virtual memory page.

Parameters:

vaddr virtual address of mapping

paddr address of page frame

flags flags used for mapping (see VM_FLAG_x constants in vm.h)

ASSERTION: we assume vaddr is aligned on a page boundary

ASSERTION: we assume paddr is aligned on a page boundary

Definition at line 13 of file vm.c.

References `alloc()`, `assert`, `invalidate_tlb()`, `PAGE_OFFSET_OF`, `PAGE_SIZE`, `PAGE_TABLE_ENTRIES`, `PAGE_TABLE_OF`, `PAGE_TABLE_PTE_OF`, `PDE_OF`, `PTE_OF`, `VM_FLAG_PRESENT`, `VM_FLAG_USER`, and `VM_FLAGS_PAGE_TABLE`.

Referenced by `vm_alloc()`, and `vm_vfree_block()`.

```

13                                     {
14     pte_t *pte, *pde;
15     addr_t page_table;
16     int idx;

```
#include <kernel.h>
```

```
#include <slab.h>
```

Include dependency graph for vm_alloc.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct **vm_link_t**
links forming the linked lists of free virtual memory pages
- struct **vm_alloc_t**
data structure which keep tracks of free pages in a region of virtual memory

Typedefs

- typedef struct **vm_link_t** **vm_link_t**
- typedef struct **vm_alloc_t** **vm_alloc_t**

Functions

- **addr_t vm_valloc** (vm_alloc_t *pool)
Allocate a page of virtual memory (not backed by physical memory).
- **void vm_vfree** (vm_alloc_t *pool, addr_t addr)
Return a single page of virtual memory to a pool of available pages.
- **void vm_vfree_block** (vm_alloc_t *pool, addr_t addr, size_t size)
Return a block of contiguous virtual memory pages to a pool of available pages.
- **addr_t vm_alloc** (vm_alloc_t *pool, unsigned long flags)
Allocate a physical memory page and map it in virtual memory.
- **void vm_free** (vm_alloc_t *pool, addr_t addr)
*Free a physical page mapped in virtual memory (which was typically obtained through a call to **vm_map()** (p. 41)).*

4.17.1 Typedef Documentation

4.17.1.1 typedef struct vm_alloc_t vm_alloc_t

Definition at line 34 of file vm_alloc.h.

4.17.1.2 typedef struct vm_link_t vm_link_t

Definition at line 19 of file vm_alloc.h.

4.17.2 Function Documentation

4.17.2.1 addr_t vm_alloc (vm_alloc_t * pool, unsigned long flags)

Allocate a physical memory page and map it in virtual memory.

Parameters:

pool data structure managing the virtual memory region in which page will be mapped

flags flags for page mapping (passed as-is to **vm_map()** (p. 41))

TODO: handle the NULL pointer

Definition at line 135 of file vm_alloc.c.

References alloc(), PAGE_SIZE, vm_map(), and vm_valloc().

Referenced by slab_alloc().

```

135                                     {
136     addr_t paddr, vaddr;
137
140     vaddr = vm_valloc(pool);
141     paddr = alloc(PAGE_SIZE);
142     vm_map(vaddr, paddr, flags);
143
144     return vaddr;
145 }
```

Here is the call graph for this function:

4.17.2.2 void vm_free (vm_alloc_t * pool, addr_t addr)

Free a physical page mapped in virtual memory (which was typically obtained through a call to **vm_map()** (p. 41)).

The physical memory is freed and the virtual page is returned to the virtual address space allocator.

Parameters:

pool data structure managing the virtual memory region to which the page is returned address of page to free

ASSERTION: address of page should not be the null pointer

Definition at line 154 of file vm_alloc.c.

References assert, free(), NULL, PAGE_MASK, PTE_OF, vm_unmap(), and vm_vfree().

```

154                                     {
```

```

155     addr_t paddr;
156
157     assert( addr != (addr_t)NULL );
158
159     paddr = (addr_t)(*PTE_OF(addr) | ~PAGE_MASK);
160
161     vm_unmap(addr);
162     vm_vfree(pool, addr);
163     free(paddr);
164 }

```

Here is the call graph for this function:

4.17.2.3 `addr_t vm_valloc (vm_alloc_t * pool)`

Allocate a page of virtual memory (not backed by physical memory).

This page may then be used for temporary mappings, for example. Page is allocated from a specific virtual memory region managed by a **vm_alloc_t** (p. 13) data structure.

Parameters:

pool data structure managing the virtual memory region from which to allocate

Returns:

address of allocated page

ASSERTION: block size should be an integer number of pages

ASSERTION: returned address should be aligned with a page boundary

Definition at line 17 of file `vm_alloc.c`.

References `vm_link_t::addr`, `assert`, `vm_alloc_t::cache`, `vm_alloc_t::head`, `vm_link_t::next`, `NULL`, `PAGE_OFFSET_OF`, `PAGE_SIZE`, `vm_link_t::size`, `vm_alloc_t::size`, and `slab_free()`.

Referenced by `vm_alloc()`.

```

17                                     {
18     addr_t addr;
19     vm_link_t *head;
20     size_t size;
21
22     head = pool->head;
23
24     /* no page available */
25     if(head == (addr_t)NULL) {
26         return (addr_t)NULL;
27     }
28
29     addr = head->addr;
30     size = head->size - PAGE_SIZE;
31
32     assert( PAGE_OFFSET_OF(size) == 0 );
33
34     /* if block is made of only one page, we remove it from the free list */
35     if(size == 0) {
36         pool->head = head->next;
37         slab_free(pool->cache, head);
38     }
39     else {
40         head->size = size;
41         head->addr += PAGE_SIZE;
42     }
43
44     assert( PAGE_OFFSET_OF(addr) == 0 );
45
46     return addr;
47 }

```

Here is the call graph for this function:

4.17.2.4 void vm_vfree (vm__alloc__t * *pool*, addr__t *addr*)

Return a single page of virtual memory to a pool of available pages.

Should not be used to free pages to which physical memory is still mapped (no physical memory is freed by this function). Use this function to return pages obtained by a call to **vm__valloc()** (p. 79) (and not **vm__alloc()** (p. 77)).

Parameters:

pool data structure managing the relevant virtual memory region

addr address of virtual page which must be freed

Definition at line 59 of file vm__alloc.c.

4.17 /data/home/phil/svn/jinue/include/vm_alloc.h File Reference

References PAGE_SIZE, and vm_vfree_block().

Referenced by vm_free().

```
59                                     {
60     vm_vfree_block(pool, addr, PAGE_SIZE);
61 }
```

Here is the call graph for this function:

4.17.2.5 void vm_vfree_block (vm_alloc_t * pool, addr_t addr, size_t size)

Return a block of contiguous virtual memory pages to a pool of available pages.

Should not be used to free pages to which physical memory is still mapped (no physical memory is freed by this function).

Parameters:

pool data structure managing the relevant virtual memory region

addr starting address of virtual memory block

size size of block

ASSERTION: we assume starting address is aligned on a page boundary

ASSERTION: we assume size of block is an integer number of pages

ASSERTION: address of block should not be the null pointer

Definition at line 71 of file vm_alloc.c.

References vm_link_t::addr, alloc(), assert, vm_alloc_t::cache, slab_cache_t::empty, vm_alloc_t::head, vm_link_t::next, NULL, PAGE_OFFSET_OF, PAGE_SIZE, slab_cache_t::partial, vm_link_t::size, slab_add(), slab_alloc(), slab_prepare(), slab_cache_t::vm_allocator, VM_FLAG_KERNEL, and vm_map().

75     assert( PAGE_OFFSET_OF(addr) == 0 );
76
77     assert( PAGE_OFFSET_OF(size) == 0 );
78
79     assert( addr != (addr_t)NULL );
80
81     /* The virtual address space allocator needs a slab cache from which to
82        allocate data structures for its free list. Also, each slab cache needs
83        a virtual address space allocator to allocate slabs when needed.
84
85        There can be a mutual dependency between the virtual address space
86        allocator and the slab cache. This is not a problem in general, but a
87        special bootstrapping procedure is needed for initialization of the
88        virtual address space allocator in that case. The virtual address space
89        allocator will actually "donate" a virtual page (backed by physical ram)
90        to the cache for use as a slab.
91
92        This case is handled here
93    */
94    if(pool->head == NULL) {

Include dependency graph for vm_alloc.c:

Functions

- **addr_t vm_valloc** (**vm_alloc_t** *pool)
Allocate a page of virtual memory (not backed by physical memory).
- **void vm_vfree** (**vm_alloc_t** *pool, **addr_t** addr)
Return a single page of virtual memory to a pool of available pages.
- **void vm_vfree_block** (**vm_alloc_t** *pool, **addr_t** addr, **size_t** size)
Return a block of contiguous virtual memory pages to a pool of available pages.
- **addr_t vm_alloc** (**vm_alloc_t** *pool, unsigned long flags)
Allocate a physical memory page and map it in virtual memory.

- void **vm_free** (**vm_alloc_t** *pool, **addr_t** addr)

*Free a physical page mapped in virtual memory (which was typically obtained through a call to **vm_map()** (p. 41)).*

4.28.1 Function Documentation

4.28.1.1 **addr_t** **vm_alloc** (**vm_alloc_t** * pool, unsigned long flags)

Allocate a physical memory page and map it in virtual memory.

Parameters:

pool data structure managing the virtual memory region in which page will be mapped

flags flags for page mapping (passed as-is to **vm_map()** (p. 41))

TODO: handle the NULL pointer

Definition at line 135 of file **vm_alloc.c**.

References **alloc()**, **PAGE_SIZE**, **vm_map()**, and **vm_valloc()**.

Referenced by **slab_alloc()**.

```

135                                     {
136     addr_t paddr, vaddr;
137
140     vaddr = vm_valloc(pool);
141     paddr = alloc(PAGE_SIZE);
142     vm_map(vaddr, paddr, flags);
143
144     return vaddr;
145 }
```

Here is the call graph for this function:

4.28.1.2 void vm_free (vm_alloc_t * pool, addr_t addr)

Free a physical page mapped in virtual memory (which was typically obtained through a call to **vm_map()** (p. 41)).

The physical memory is freed and the virtual page is returned to the virtual address space allocator.

Parameters:

pool data structure managing the virtual memory region to which the page is returned address of page to free

ASSERTION: address of page should not be the null pointer

Definition at line 154 of file vm_alloc.c.

References assert(), free(), NULL, PAGE_MASK, PTE_OF, vm_unmap(), and vm_vfree().

```

154                                     {

156
157     assert( addr != (addr_t)NULL );
158
159     paddr = (addr_t)(*PTE_OF(addr) | ~PAGE_MASK);
160
161     vm_unmap(addr);
162     vm_vfree(pool, addr);
163     free(paddr);
164 }

```

Here is the call graph for this function:

4.28.1.3 addr_t vm_valloc (vm_alloc_t * pool)

Allocate a page of virtual memory (not backed by physical memory).

This page may then be used for temporary mappings, for example. Page is allocated from a specific virtual memory region managed by a **vm_alloc_t** (p. 13) data structure.

Parameters:

pool data structure managing the virtual memory region from which to allocate

Returns:

address of allocated page

ASSERTION: block size should be an integer number of pages

ASSERTION: returned address should be aligned with a page boundary

Definition at line 17 of file vm_alloc.c.

References vm_link_t::addr, assert, vm_alloc_t::cache, vm_alloc_t::head, vm_link_t::next, NULL, PAGE_OFFSET_OF, PAGE_SIZE, vm_link_t::size, vm_alloc_t::size, and slab_free().

Referenced by vm_alloc().

```

17                                     {

38         slab_free(pool->cache, head);
39     }
40     else {
41         head->size = size;
42         head->addr += PAGE_SIZE;
43     }
44
45     assert( PAGE_OFFSET_OF(addr) == 0 );
46
47     return addr;
48 }

```

4.28 /data/home/phil/svn/jinue/kernel/vm_alloc.c File Referend25

Here is the call graph for this function:

4.28.1.4 void vm_vfree (vm_alloc_t * pool, addr_t addr)

Return a single page of virtual memory to a pool of available pages.

Should not be used to free pages to which physical memory is still mapped (no physical memory is freed by this function). Use this function to return pages obtained by a call to **vm_valloc()** (p. 79) (and not **vm_alloc()** (p. 77)).

Parameters:

pool data structure managing the relevant virtual memory region

addr address of virtual page which must be freed

Definition at line 59 of file vm_alloc.c.

References PAGE_SIZE, and vm_vfree_block().

Referenced by vm_free().

```
59 {  
60     vm_vfree_block(pool, addr, PAGE_SIZE);  
61 }
```

Here is the call graph for this function:

4.28.1.5 void vm_vfree_block (vm_alloc_t * pool, addr_t addr, size_t size)

Return a block of contiguous virtual memory pages to a pool of available pages.

Should not be used to free pages to which physical memory is still mapped (no physical memory is freed by this function).

Parameters:

pool data structure managing the relevant virtual memory region

addr starting address of virtual memory block

size size of block

ASSERTION: we assume starting address is aligned on a page boundary

ASSERTION: we assume size of block is an integer number of pages

ASSERTION: address of block should not be the null pointer

Definition at line 71 of file vm_alloc.c.

References vm_link_t::addr, alloc(), assert, vm_alloc_t::cache, slab_cache_t::empty, vm_alloc_t::head, vm_link_t::next, NULL, PAGE_OFFSET_OF, PAGE_SIZE, slab_cache_t::partial, vm_link_t::size, slab_add(), slab_alloc(), slab_prepare(), slab_cache_t::vm_allocator, VM_FLAG_KERNEL, and vm_map().

Referenced by vm_vfree().

```

71                                     {
72     addr_t phys_page;
73     vm_link_t *link;
74
75     assert( PAGE_OFFSET_OF(addr) == 0 );
76
77     assert( PAGE_OFFSET_OF(size) == 0 );
78
79     assert( addr != (addr_t)NULL );
80
81
82     /* The virtual address space allocator needs a slab cache from which to
83        allocate data structures for its free list. Also, each slab cache needs
84        a virtual address space allocator to allocate slabs when needed.
85
86        There can be a mutual dependency between the virtual address space
87        allocator and the slab cache. This is not a problem in general, but a
88        special bootstrapping procedure is needed for initialization of the
89        virtual address space allocator in that case. The virtual address space
90        allocator will actually "donate" a virtual page (backed by physical ram)
91        to the cache for use as a slab.
92
93        This case is handled here
94
95        */
96     if(pool->head == NULL) {
97         if(pool->cache->vm_allocator == pool) {
98             if(pool->cache->empty == NULL && pool->cache->partial == NULL) {
99                 /* allocate a physical page for slab */
100                 phys_page = alloc(PAGE_SIZE);
101
102                 /* map page */
103                 vm_map(addr, phys_page, VM_FLAG_KERNEL);
104
105                 /* prepare the slab and add it to cache empty list */

```

4.28 /data/home/phil/svn/jinue/kernel/vm_alloc.c File Referend27

```
107         slab_prepare(pool->cache, addr);
108         slab_add(&pool->cache->empty, addr);
109
110         size -= PAGE_SIZE;
111
112         /* if the block contained only one page, we have nothing left
113            to free */
114         if(size == 0) {
115             return;
116         }
117
118         addr += PAGE_SIZE;
119     }
120 }
121 }
122
123 link = (vm_link_t *)slab_alloc(pool->cache);
124 link->size = size;
125 link->addr = addr;
126
127 link->next = pool->head;
128 pool->head = link;
129 }
```

Here is the call graph for this function:
